<b>Libraries/Frameworks</b>	React JS
<b>Tools/Platforms</b>	VS Code, IntelliJ, Github, Postman, MySQL WorkBench

---

## EXPERIENCE

<b>eNMB - PayNet System</b>	Mar 23- Oct 23
<ul style="list-style-type: none"><li>- Immersed in the dynamic realm of Fintech during an internship as a Software Engineer at PayNet Systems.</li><li>- Demonstrated passion for designing and developing RESTful APIs using Spring Boot.</li><li>- Actively contributed to the pivotal technology in the fintech landscape.</li><li>- Developed expertise in creating robust and efficient APIs.</li><li>- Collaborated with team members to ensure seamless integration and functionality.</li><li>- Demonstrated commitment to staying updated on industry trends and advancements in fintech.</li></ul>	

---

## PROJECTS

### Online voting management system

- Developed and implemented an innovative online voting management system for college elections in response to the challenges posed by COVID-19.
- Enabled the administration to easily add candidates and posts, and provided real-time access to poll results .
- Utilized React, a JavaScript library, to create a secure and user-friendly platform.

### Online restaurant management systems

- Developed an Online Restaurant Management System using Spring Boot and Hibernate .
- Created a user-friendly web portal for restaurants to efficiently manage various activities in real-time .
- Implemented features for efficient menu management, order tracking, inventory control, and staff scheduling.
- Improved efficiency and customer satisfaction by providing real-time updates and reducing manual processes .
- Enhanced data security by implementing user authentication and authorization features .

### CrickInfo Web

- Built a dynamic cricket information platform using React and Spring Boot.
- Implemented real-time score updates and points table through web scraping.
- Developed a user-friendly interface for easy navigation and data consumption.
- Optimized website for efficient data retrieval and display.
